Re: Site Inspection, Old Rock Farm, SM/019/019

On December 14, 1987 I inspected the above referenced stone quarry. The quarry is accessed by driving 12 miles off the interstate and making a hard left just after a Y in the road. Take this road for one more mile to the site.

The quarry is very old. There are approximately three acres that have been quarried at the base of the hill. A pile of large rock is stockpiled in this area. Wire pallets containing smaller rock are located at the top of the hill. The site, in contrast to an early Division inspection in 1986, is very clean and well kept.

American Stone Company is no longer involved with this property. Gary Thompson, one of the claim holders, plans to extend the quarry to the top of the hill into State Section 16 where he holds the mineral lease.
